BRAINARD'S Popular Lawn Grass Seed Mixtures

**EVERY POUND OF MIXED GRASS SEED SOLD BY US IS MIXED BY US
WE BUY NO MIXED SEED**

The mixtures are made uniformly, to our own balanced formulas from selected, high grade stocks.

Quantity To Use

The following quantities will be practical on most lawn mixtures. For new lawns, use 1 lb. to 250 sq. ft., 4 lbs. to 1000 sq. ft. For replenishing old lawns we recommend about one-third to one-half this quantity of seed.

Brainard's Rex Mixture

This is our very best mixture for general use and is actually a blend of a number of high grade grasses most suitable to withstand the close cutting, extremes of weather and other adverse conditions ordinary lawns have to endure. This mixture will positively, under favorable conditions produce a permanent, fine texture lawn. 1 lb. \$1.20, 2 lbs. \$2.40, 3 lbs. \$3.60, 5 lbs. \$6.00, 10 lbs. \$12.00, 15 lbs. \$17.25, 25 lbs. \$28.25, 50 lbs. \$56.00, 75 lbs. \$83.25, 100 lbs. \$110.00.

Brainard's Verigood Mixture

This is a mixture of good, serviceable lawn grasses, and while not quite equal in velvety texture to our Rex Mixture, is less expensive and answers well where a high quality, fine bladed grass is not really necessary. 1 lb. 90c, 2 lbs. \$1.80, 3 lbs. \$2.70, 5 lbs. \$4.50, 10 lbs. \$8.90, 15 lbs. \$13.20, 25 lbs. \$21.60, 50 lbs. \$42.50, 75 lbs. \$62.60, 100 lbs. \$82.00.

Brainard's Shady Corner

This mixture is composed of dwarf growing, strong rooting grasses which thrive more or less in sheltered or shaded locations, and will make a quick showing though gradually build a strong green turf. 1 lb. \$1.10, 2 lbs. \$2.20, 3 lbs. \$3.30, 5 lbs. \$5.40, 10 lbs. \$10.70, 15 lbs. \$15.90, 25 lbs. \$26.10, 50 lbs. \$51.50, 75 lbs. \$76.10, 100 lbs. \$100.00.

To Our Customers and Friends:

Most of us consider gardening still the greatest of all sport and an extremely profitable pastime. The constant supply of fresh vegetables for home use well repays our every effort, but aside from this we receive the extra benefit of exhilarating recreation and relaxation only gardening can provide.

It would be a dreary world without flowers too, wouldn't it? That is why in so many gardens there is here and there a row or patch of flowers. These too, are an essential crop for they afford cheer and brightness in our daily life.

SEED SITUATION FOR 1947

Be Careful in Buying Lawn Grass Seed This Year

The grass seed situation this year is near the critical stage. The crops of some lawn grasses are the smallest harvested in many years and this is especially true of Kentucky Blue Grass, one of our most important turf building grasses. It is durability and permanency that count in lawn grass seed mixtures, not just a quick coverage.

Our Lawn Grass Seed Formulas Unchanged

There will be no change in the formulas of our mixtures for the season 1947. Our Rex, Verigood and Shady Corner which have now become popular brands will be the same as always, this because of foresight and early buying.

VEGETABLE AND FLOWER SEED

There are still several short items in both Vegetable and Flower Seeds, this largely due to crop conditions in certain areas. The general outlook, however, is favorable though some items may be sold out before the planting season is over. We believe we are prepared to supply our customers' needs in general, yet we ask that you order early.

REGARDING SHIPPING

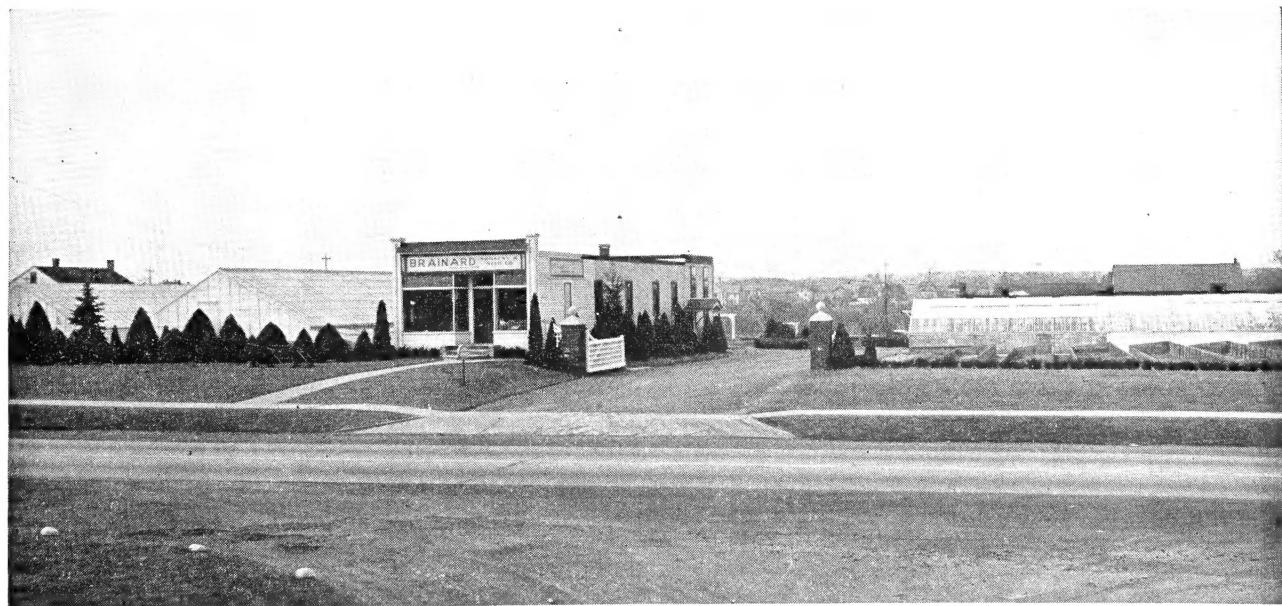

We prepay parcel post or express on orders for Flower and Vegetable Seeds at packet, ounce, or up to 10 pound rates, and on Dahlia, Galdioli, or other bulbs.

PERENNIAL SPECIALTIES

NEW AND OUTSTANDING VARIETIES

Each year sees many introductions as New and Better Perennials, many of which quickly drop from sight, while others are of exceptional value and become our perennials of today.

The following varieties have, on our own trial grounds, proven their value as outstanding sorts and we unhesitatingly recommend them:

Delphinium, Lyondel Giant Hybrids

(The Delphinium of Tomorrow)

A new and rugged strain especially selected for its large size flowers and wide range of beautiful colors. Flowers are double and semi-double; plants are extremely hardy being a strain developed here in New England. We grew and flowered several hundred plants of this new strain last year with a result far exceeding our highest expectation. 60c each, 3 for \$1.65, 6 for \$3.00, \$5.75 per doz.

Coreopsis

Verticillata Nana Golden Shower. Well named it is, for throughout the entire season, from June to frost, the plant is constantly covered with star-like golden yellow flowers about $1\frac{1}{2}$ inches in diameter; the plant is of attractive form and the foliage slender, graceful and dainty. This is one of the good new perennials and will become a garden favorite. 40c each, 3 for \$1.10.

Lupinus

Russell Hybrids. Right, the Russell Lupins are not new, nevertheless they hold the honors of being the finest Lupins in cultivation today and are being more and more prized as they become better known. The tall, straight stems of true Lupin-like flowers are in colors heretofore unknown and still very uncommon in Lupins. These Hybrids are often seen in yellow, orange and pink as well as blue and white. We offer very fine strong plants that will, in proper conditions, flower freely this season. 50c each, 3 for \$1.40.

Lythrum

Salicaria, The Beacon. Though this new perennial is a variety of common Loosestrife, it is far, far superior and much more showy. The neat long spike of large clear deep carmine-red flowers are no sooner developed than the side branches or spikes are beginning to show color and continue to bloom for several weeks. When at its height it will appear like a small shrub almost covered with bloom. Does equally well in dry or moist locations. 50c each, 3 for \$1.35.

Pentstemon

Cherry Glow. Large, tubular shaped flowers on 15 to 20 inch spikes in great profusion from June until frost; the color is bright cherry red touched with white at the throat; an excellent cut flower. The type and growth of the plant is like other Pentstemons of neat bushy growth; foliage is attractive. Requires winter protection. 50c each, 3 for \$1.40.

Utahensis. The dainty sprays of small, tubular-shaped flowers held on strong, straight stems rising above the low, glossy, laurel-like foliage of this strong growing perennial are really very beautiful. It is a rather unique form of flower, color is rosy lavender tipped white. Very desirable as a low growing plant for rock garden or border. 40c each, 3 for \$1.10.

Platycodon

Grandiflorum Light Pink. The Platycodons or Chinese Bellflower as they are called have long been garden favorites. This beautiful light pink variety is of special value as it adds another color to the more common blue and white sorts. It is of the same easy culture and as free flowering as the other varieties and makes a splendid border or garden subject. 40c each, 3 for \$1.10.

Polygonum

Reynoutria. This is an unusual, little known but very desirable plant. Grows 6 to 12 inches tall and rather spreading, producing in late summer a mass of fragrant, airy sprays similar to those of the Silver Lace Vine. The tiny buds are deep red opening to pink; the foliage also turns red in the fall. It is best in full sun and is most effective in poor soil. 50c each, 3 for \$1.35.

Viola

Purple Heart. Plant Patent No. 671. Certainly an outstanding introduction and one of our most beautiful Violas. Flowers really huge, velvety deep violet-blue with tiny yellow eye. The flowers of giant wavy petals are $2\frac{1}{2}$ to 3 inches across; plants are in bloom from early spring all through the summer and fall. 85c each, 3 for \$2.25.

Royal Robe. Here is the violet you have long wanted, these beautiful deep rich blue fragrant, single violets on unusually long, sturdy stems. Flowers are produced freely and plants bloom over a long season and quite freely in the early fall. Try it in your garden this year and you will fully agree with all we have said of it. 40c each, 3 for \$1.10, \$4.25 per doz.

Scabiosa

Fischeri. Not really new but a little-known variety and one deserving of much greater attention. The growth is of neat, compact, branching habit and exceedingly free flowering which is not true of all hardy Scabiosas. The flowers are about $1\frac{1}{2}$ inches in diameter and in color a beautiful deep blue. 40c each, 3 for \$1.10, \$4.25 per doz.

Cultural Suggestions

Be sure that your Glads are planted where they will get full sunshine. The kind of soil is of less importance, for Glads do well on most any fertile garden loam. If available, manure may be used but should be old or well rotted. The pulverized manures are very satisfactory or a good grade of commercial fertilizer will produce excellent results.

It is essential that the soil be thoroughly worked to a depth of 8 or 10 inches before planting, and if you are planting large bulbs (called No. 1 grade) you should plant them 6 inches deep, smaller bulbs not so deep. The distance between the bulbs can vary from 2 to 6 or 8 inches according to space to be used. Distance between the rows should be about 24 inches.

BRAINARD'S GARDEN LILIES

There are several more varieties available this season than last, and all are excellent sorts. We also offer a few really new ones.

For this spring we have some excellent quality bulbs to offer in the following varieties, though the supply of some will be limited:

Orange Triumph. A gorgeous new Lily. Though of the *Umbellatum* type, it is superior to other *Umbellatum* varieties in many ways. It grows 3 to 4 ft. tall, exceptionally strong stems producing flowers in tiers, sometimes 10 or 12 blooms per plant; flowers are often 4 to 5 in. long and about as wide, color a bright glistening pure orange with just a few tiny, dark maroon dots. A flower that never fades. It is a very easy grower. Plant bulbs 6 inches deep. 75c each, 3 for \$2.10, \$8.25 per doz.

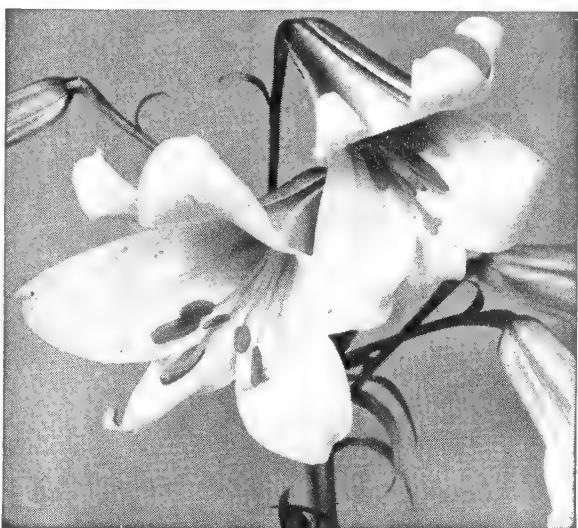

Regale (Myriophyllum). Its magnificent trumpet-shaped flowers of ivory white, shaded outside with rosy mauve, and the throat beautifully tinged canary-yellow, makes it a Lily unsurpassed. It thrives in most any rich and well drained soil, grows to a height of 3 to 5 ft. and when established, produces upwards of 10 to 15 flowers to a stalk. EVERGREENS

**American Arborvitae**

There are distinct classes of Evergreens, those suitable for foundation planting, others for screening effects and wind-breaks and other sorts for individual specimens. It is usually of greater interest to the customer what will look best and develop properly in some particular location, and it is in this selection that a nurseryman's advice could be of value. Thus we strongly recommend visiting the Nursery and selecting from the suitable sorts, the varieties as they appeal to you.

Japonex

A biological product containing milky disease spore powder for the control of the Japanese Beetle.

Produced Under License Granted by the United States Department of Agriculture.

Not harmful to humans, animals, plants or beneficial insects.

When applied to turf, as directed, Japonex provides a very effective means for controlling the Japanese Beetle by infecting and killing the grubs in the soil. Japonex treatment improves with time because the spores multiply in infected grubs and remain alive indefinitely in the soil.

Japonex may be used as spot treatment or broadcast, may be applied at any time of year, may be mixed and spread with fertilizer if desired.

PEAT MOSS

Horticultural Grade—Nature's Mulch and Soil Builder

A thoroughly decayed, natural material contributing to the formation of humus, and valuable for all types of soils. Used in sandy soils to add fiber and make more moisture retaining properties, and in heavy or clayey soils its action is to make a more friable and better drainage condition. By the retaining of proper moisture content in the soil, the fertilizers are more promptly available and retained so that roots can feed on it as needed. Peat Moss is also a wonderful preventative of soil leaching.

Peat Moss is an especially useful material in the preparation of soil for all broadleaved evergreens, such as Laurel, Rhododendrons, Azaleas, and many others, and liberal quantities of it should be thoroughly worked into the soil before planting.

Newly planted trees, shrubs, and especially evergreens of all types, are very much benefited by a liberal mulch of Peat Moss, and each Spring the last year's mulch should be worked into the soil and a new mulch applied. It is also of value as a mulch for perennial beds, Rose beds, etc.
